Professor of History of Science and Technology in Modern Times, National and Kapodistrian University of Athens

Email to: mpatin@soc.uoa.gr

Manolis Patiniotis is a historian of science and technology in modern times. He served as a professor in the Department of History and Philosophy of Science at the National and Kapodistrian University of Athens and, since 2021, has been a professor in the Department of Sociology at the same university. For many years, he studied the history of science in the European periphery and sought to link the study of European science with postcolonial studies. In recent years, his research shifted to the study of the history and philosophy of the digital. He served on the editorial board of the science communication journal *Prisma* and on the academic committees that coordinated the establishment of the graduate programs “Science Communication” at the Hellenic Open University and “Philosophy and Sociology of the Arts and Culture” (Department of Sociology, National and Kapodistrian University of Athens-Department of Philosophy, University of Patras). He maintains the website digiscapes.org, where he explores the ontological, epistemological, and political dimensions of science, technology and digitality.
